

Static Pressure Probe Assembly

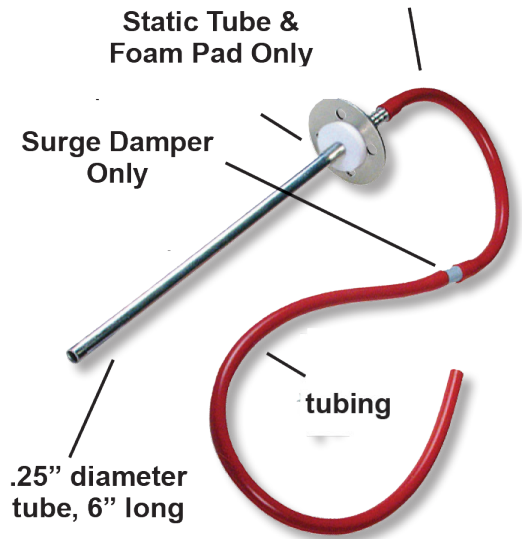

Accessories for HVAC/R

Automated Logic's Static Pressure Probe Assembly connects to the Automated Logic's Zone Pressure Sensor to provide duct static pressure or duct air velocity. The angled total probe faces into the airflow to sense the moving air's total pressure while the static probe senses static pressure.

This unit includes a tube and rubber hose with built in surge damper to smooth out variations in airflow for a more stable reading.

Part Number	Description
NSB-ZPS-ACC07-A	Duct Static Pressure Probe Assembly, 6" long

Hoses & Damper Only

Static Pressure Probe Assembly
