

Automated Demand Response

WebCTRL Add-on

Automated Demand Response (OpenADR®) add-on is a software application that allows a utility supplier to automatically and securely communicate with the Automated Logic WebCTRL® building automation system.

The OpenADR add-on listens for demand curtailment signals from the utility company. These signals are passed to the WebCTRL system, where demand-reduction strategies are applied to the connected HVAC equipment. When participating in automated demand response programs, customers may receive reduced utility rates or utility rebates¹.

¹ Cost reductions are dependent on proper implementation of demand response strategy. Availability of rebates depends on your utility provider. Please contact your utility provider for more information.

Key Features & Benefits

- Provides a standardized connection to utility providers that participate in OpenADR® demand response programs
- Facilitates participation with Critical Peak Pricing (CPP) events, which may lead to cost reductions
- Earn incentives for participation, depending on utility company

Requirements

- Requires the WebCTRL system version 6.5* or later (*with the latest cumulative patch)
- Meets OpenADR profile 2.0a+b. Simple signal profile 2.0a+b application are available in the EquipmentBuilder library; other signal types are supported using custom EIKON applications
- [OpenADR certified](#)

Example Application
