INDOOR AIR QUALITY DESKTOP DISPLAY SENSOR, BACNET COMMUNICATING

Multiple public studies¹ suggest that indoor environments can profoundly impact the health and decision-making performance of building occupants. They advise that the levels of carbon dioxide, volatile organic compounds, and particulate matter that we commonly encounter in schools, healthcare facilities, and commercial office buildings should be held within healthy thresholds. Additionally, humidity can increase heating and cooling costs, support mold and bacterial growth, contributing to allergies, respiratory problems, and occupant discomfort.

Automated Logic's Indoor Air Quality desktop display sensor provides building occupants simple visual indicators and alerts of critical indoor air quality measures.

KEY FEATURES AND BENEFITS

- Measures and displays six critical elements of healthy indoor air quality: temperature, humidity, particulate matter (PM2.5), carbon dioxide (CO₂), total volatile organic compounds (TVOC), and the carcinogen formaldehyde (HCHO)
- Features a bright 4.3 inch TFT capacitive touch screen with a resolution of 800*480, that dims when not in use
- Easily integrates with the Automated Logic WebCTRL system via BACnet/WiFi to share sensed values
- Has a passive infrared (PIR) human proximity sensor to wake the display when occupants are nearby
- Powered by USB Type-c and has a lithium ion battery as a backup power supply
- Supports firmware upgrades via USB if required
- Compact, low-profile, attractive design
