

Move your BAS Forward with WebCTRL® Cloud

Embrace the Future: Upgrade Your On-Premises Software to WebCTRL® Cloud

WebCTRL Cloud offers a seamless migration of your building automation server software to the cloud, enabling confident scaling and reduced support burden. Powered by Amazon Web Services (AWS), it delivers all the features of the WebCTRL system without the cost of an on-site BAS server. Through a convenient subscription, you can optimize building operations, save energy, and ensure occupant comfort, while Automated Logic's factory team maintains the security and integrity of your WebCTRL software.

Why Upgrade to WebCTRL Cloud?

Enhanced Security: Protect against cyber threats and vulnerabilities with the latest security features, including BACnet Secure Connect (BACnet/SC) for encrypted communication.

Automatic Updates: Stay ahead of the curve with quarterly updates.

Future-Proof Your Investment: Ensure long-term value with a scalable, open system that adapts to evolving technologies, including support for both IPv4 and IPv6 internet protocols.

Easy Migration: Simplify your move to WebCTRL Cloud with expert-guided data transfer, configuration, and testing, ensuring a seamless, disruption-free transition.

WebCTRL Cloud Benefits

Reduced Support Burden: Leverage AWS infrastructure and Automated Logic's expertise to reduce server management, enhance uptime, streamline cloud migration, and free your team for other critical tasks.

Affordable and Accessible: Provide users with flexible remote access and robust self-service tools, all while eliminating upfront server costs and simplifying budget management.

Assured Server Uptime: Helps guarantee high availability and continuous operation of your building automation system.

Triple Datacenter Redundancy: Offers enhanced data protection and disaster recovery capabilities.

Secure and Resilient: Utilize AWS security features and encrypted connections to maintain a secure and compliant building automation network with proactive threat detection, including daily database backups and Amazon GuardDuty Threat Detection Service.

Scalable and Expandable: Achieve seamless integration with other cloud services and IoT devices, enabling scalable solutions that adapt to evolving building requirements and support multi-site consolidation.
